Art Unit: 3654

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "for enhancing a coefficient of friction" is not clear. It is not clear where it is enhanced, between which elements, and how (by which structural feature?).

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiga et al (US 6663035). Sheet member RT should be noted.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shiga et al (US 6663035).

Shiga et al also teaches providing the sheet member between the clamp and the tape; therefore, it would have been obvious to a person having ordinary skill in the art to provide a sheet member between the clamp and the tape to further reinforce the connection.

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

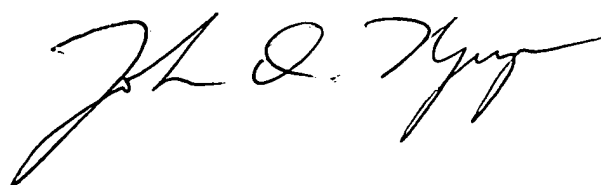

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
